

Come to Visitor Night at the UCI Observatory!

**Saturday
June 21
8 – 10 pm**

Come to our last visitor night at our current location and use our telescopes to explore the Summer sky and see Mars, Saturn and its moons, the Ring Nebula M57, and star clusters. Learn how to use a night sky map to locate your favorite constellations. Listen to a lecture entitled "The Dark Universe" by

Dr. Kevork Abazajian about dark matter and dark energy. Visitors should park in the East Campus Parking Structure at California Avenue & Adobe Circle Road South for \$2/hr or \$14 maximum and take a shuttle to the Observatory's gravel road at the corner of California Avenue & Gabrielino Drive. The event will be canceled only if it rains, but if so, a notice would be posted on our website by 3 pm that day. To obtain more information, a campus map, driving directions, request email notices of future Observatory events or join Friends of the Observatory, please see our web site: <http://ps.uci.edu/~observat>.

The UCI Observatory is operated by the University of California, Irvine, Department of Physics & Astronomy, and Visitor Nights are funded by the School of Physical Sciences, Friends of the Observatory and donations from our generous visitors.
